

Wireless AES Network Analyst (Saskatoon)

Vecima Networks designs and manufactures products that enable broadband access to cable, wireless and telephony networks. With global deployments, a proven product library and a team of more than 900 professionals worldwide, we provide our customers with advanced solutions.

The WAES (Wireless Application and Engineering Support) group is responsible for the overall WiMAX and BWIN support strategy. This includes components necessary to not only successfully deploy basic broadband wireless (802.16d and DOCSIS based wireless), but also value add software and network technologies required to enhance system deployments.

The WAES Network Analyst must work closely with the Sales and Operations/Planning in order to better serve pre and post sales support requirements. The WAES Network Analyst will be responsible for the successful design and launch of the wireless networks and their on-going evolution.

Requirements:

- 3 years experience with networking design and management and/or bachelor degree or equivalent in Computer Science/Electrical Engineering.
- A minimum of 2 years experience with Linux administration.
- Working knowledge of scripting languages (Bash, Perl ect.) experience preferred.
- A knowledge of TCP/IP and Ethernet protocols required.
- Strong technical skills & expertise, ideally in microwave or telecommunications.
- Experience working in or with operators in a technical or advisory role is preferred.
- Strong communication internally across various departments.
- International market and Customer interaction experience.

Duties and Responsibilities to include (but not limited to):

- Manages and ensures optimal operation of all network hardware and software including firewalls, routers, switches, network management and other third party equipment.
- Analyzes and resolves technical problems related to the operation of networks to ensure high levels of availability and security.
- Accountable for current information regarding the latest products and technologies, security threats and advisories, relevant patches and upgrades for the network infrastructure hardware and software used in Vecima's customer deployments.
- Monitor and review logs and network traffic. Interpret activity and make recommendations for optimization.

Vecima Networks Inc. has a competitive compensation and benefits package, and strives to provide a challenging work environment that can foster skill development and personal career growth for all employees.
