RE: WaveRider LMS8000

To whom it may concern:

For nearly five years Norcom 2000, Inc. has deployed the WaveRider gear and has been very satisfied with the equipment; so naturally when the WaveRider LMS8000 system was released it made sense to upgrade.

Norcom 2000, Inc. has been using the WaveRider LMS8000 system in our networks and is pleased to say that system performance has been excellent. With up to 8 mbps in a 5.5 MHz channel the WaveRider gear offers a great deal of system capacity to our service base. Diversity antenna's in the EUM8000 integrated modem means we are able to penetrate clutter with further distances and foliage penetration than non diversity antenna systems.

We are very pleased that Vecima has built the LMS8000 system, which protects our initial investment, to be backward compatible with most of the older generation Customer Premise Equipment.

Thank you for the great wireless equipment gear and the superior service.

Respectfully,

NORCOM 2000, INC.

Harry E. Norton
