To whom it may concern,

Nextcom was on of the first to install a WaveRider LMS8000 system in our network. We did the installation on our own without any help from Vecima and the product worked right away without any issues. In fact my clients started to notice the positive change in the network almost immediately. With up to 8 mbps in a 5.5 MHz channel the WaveRider gear offers a great deal of system capacity to our service base.

Diversity antenna's in the EUM8000 integrated modem means we are able to penetrate clutter and foliage with further distances than non diversity antenna systems. I am convinced without the diversity feature I would not be able to do half the installation I can do with this product line.

I am also very impressed with Vecima's indoor diversity antenna. I have many clients close to my tower allowing me to use the indoor antenna in many of our installations. Having an indoor antenna allows me to do fast and reliable installations. In some cases I have used this indoor antenna in non-traditional installations and it has performed extremely well.

We are very pleased that Vecima has built the system to be backward compatible with most of the old generation CPE making the transition smooth at the same time protecting our investment.

Technical Support's product knowledge and helpfulness has been great!! I have learned a great deal from those folks.

Please do not hesitate to contact me if you have any questions.

Regards,
